5 Tips to protect your financial accounts

Fortify your password

Weak passwords can leave your accounts exposed and have played a role in numerous data breaches.

Practice good data hygiene

Make sure your bank account and others with links to your financial data use two-factor authentication.

Be alert and wary

Think before you click any message asking you to follow a link to a website that requires sensitive information.

Secure your phone

If your phone falls into the wrong hands your accounts may be quickly compromised. Use a PIN that scammers won't easily guess.

Report fraud

If you've fallen victim to scammers, it's important to act quickly. Financial institutions may be able to limit the damage and help you recover funds.
